

Mesonet Wheat Growth Day Counter Description

The Wheat Growth Day Counter (previously Number of Days GDD>0) is a table that shows the number of days when wheat degree-day heat units were positive from a user specified planting date. The temperature base used is 40°F. Table data are used in making nitrogen fertilizer recommendations with GreenSeeker® technology in Oklahoma.

For additional information on the OSU Nitrogen Use Efficiency, click the "*OSU Nitrogen Use Efficiency*" link in the left Mesonet Agriculture Crop Wheat menu.
